Forecast for Monday 07 Dec 2020

Weather: Mist and fog shrouding most slopes, thinning and breaking very slowly through the morning to leave some brief spells of sunshine during the afternoon, though these will be longer in the west. Cloud will thicken from the west towards midnight bringing a few snow showers.

Chance of cloud free mountain/hill tops above 600m: 10% rising 70% through morning as cloud lifts and breaks.

Visibility: Fog conditions on the hills initially but this will gradually lift through morning to leave good views.

Meteorologist's View

A cold day. Fog may be quicker to clear across the west than suggested.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
03:00 on Mon 07 Dec 2020	0.2mm	3mm	7.6mm

Forecast for Tuesday 08 Dec 2020

Weather: Quite a contrast in conditions compared to Monday, with spells of rain and summit sleet spreading from the northwest all day along with fresh northwest winds. Summit temperatures just above freezing and wet conditions will lead to marked windchill.

Maximum wind: West 15-20mph gusting up to 35mph.

Chance of cloud free mountain/hill tops above 600m: 10% as cloud quickly becomes extensive above 400-500m across all parts. Some limited shelter across southeast facing slopes.

Visibility: Very limited at height in cloud and hazy at low levels given frequency of rain.

Temperature: **Valleys:** 3 rising 6C.
At 600m: 1 or 2C.
Freezing level: Above summits.
